

Luxman M-700u Stereofoniczna Końcówka Mocy Salon Poznań Wrocław

Cena: 204 142 Kč

Gwarancja: Producenta 2 lata

Dostępne kolory: Srebrny

VLASTNOSTI

Waga (kg): 27, 5

Głębokość (cm): 24, 7

Szerokość (cm): 44

Wysokość (cm): 19

POPIS VÝROBKŮ

Luxman M-700u

M-700u zbudowany został na czterech równoległych jednostkach wyjściowych w układzie push-pull. Do momentu uzyskania pierwszych 12W pracy, wzmacniacz pracuje czystej klasie A. Większe wartości wzmocnienia powodują płynnie przejście do klasy AB.

Za zredukowane do minimum zniekształceń odpowiada najnowsza wersja odbodów ODNF (wersji 4.0).

High-power 4-parallel module, ODNF circuit, version 4.0

A powerful drive circuit is necessary to amplify sound signals from a control amplifier with high fidelity and to exploit the performance of various speakers. M-700u has achieved the output of up to 840 W + 840 W (1Ω) instantaneously from the rated output of 120 W + 120 W (8Ω) and 210 W + 210 W (4Ω). Speakers can be driven with its sufficient power under any load conditions. Moreover, the BLT mode allows the user to use the unit as a monaural amplifier with the rated output of 420 W(8Ω). A 4-parallel push-pull structure with 3-stage Darlington is used in this circuit to acquire such high power. The latest version, ODNF 4.0 circuit, that has achieved primary slew rate speed indicating the startup performance by feeding back only distortion components, ultra-wide bandwidth, and low level of distortion is adopted for the amplifier circuit, which is inherited from M-900u, our top-end model. Precise reproduction of a small sound signal has enhanced the elaborate sound

expression and the expressive capability of tranquillity. Setting up to 6 W with which sound range can be practically and sufficiently acquired to the Class A operation range, it has made its high power consistent with sound expression of high density.

* ODNF is an abbreviation for "Only Distortion Negative Feedback".

Large-capacity power supply circuit

M-700u is equipped with high-performance EI type power transformer whose rated capacity is as much as 550 VA with a reputation for its tone quality full of dynamism including bass range perseverance to support overwhelmingly powerful power supply unit. A high level of regulation ability that is unshakable by any load fluctuation has been achieved.

Low impedance transmission

In order to transmit the powerful drive force generated by the large-scale output circuit without any loss, super-thick wires for major current systems and large-capacity speaker relays with low resistance in which 4 contacts are connected in parallel are equipped. Transmission of thoroughly low impedance has been achieved, and 350 of the damping factor has been accomplished.

Large-capacity block condenser

The combination of block capacitor with high-capacity of 80,000 μ F (10,000 μ F x 8) whose right and left channels are independent and a power transformer configures high-inertia power supply that offers both instantaneous force and a sense of stability. This unit supports the performance of M-700u from the bottom and delivers the sound dynamism amazingly.

Beeline construction

The beeline construction is adopted, which makes the internal configuration of the power amplifier reasonable and also makes the wiring route shortest. The traditional wiring pattern of the substrate with use of copper foil of approx. 100 μ m in thickness allows highly pure signal transmission to be achieved.

Large type of needle-type meter

A large-scale needle-type meter is adopted to provide not only audible but also physical sensation for the lively feeling of the music. The electric bulb color of the LED illumination is the result of our persistence in dignity and visibility. This meter can be switched in 3 steps with use of the switch on the front panel as follows: Operation ON/Light ON → Operation ON/Light OFF → Operation OFF/Light OFF.

Highly rigid chassis structure supporting heavy parts

A stray current in the chassis generated by the ground loop may cause the deterioration of sound quality such as increase in impedance and magnetic field generation. To prevent this trouble, M-900u uses the loopless chassis that does not have a ground loop. The gradation cast-iron is used for the legs to shut off external vibrations and relieve internally generated vibrations. The chassis has a structure to hold heavy parts firmly and an appearance to show overwhelming presence and to be covered with blasted white neatly, which leads to the combination of strong and calm design.

Specially selected custom parts

M-700u consists of original custom parts, considering the sound quality as the first priority, such as resistances, capacitors, even all wires, which have been generated from Luxman's highly advanced know-how and sensibility accumulated in producing audio products for a long time. Those parts have contributed to realizerich tone that Luxman has pursued.

Dane techniczne

Rated output 120W + 120W (8Ω)/at stereo
210W + 210W (4Ω)/at stereo
420W (8Ω)/at monaural Instantaneous max. output 840W + 840W (1Ω)/at stereo
1,680W (2Ω)/at monaural Kupuj w audioplaza.pl Input sensitivity 1.1V/120W (8Ω)
GAIN 29.0dB Input impedance Unbalanced 51kΩ
